Structure and

Components of Solved MCQs in Economics

Typical Components

A well-designed solved MCQ in economics generally comprises:

- The Question:** Clearly states the problem or scenario.
- Answer Options:** Usually four or five options, with one correct answer.
- Correct Answer Highlighted:** The key to the question.
- Detailed Explanation:** Breaks down the reasoning step-by-step.
- References or Theoretical Basis:** Cites relevant concepts or models.

Example Structure

Let's consider an example:

Question: Which of the following best describes the 'Law of Demand'?

A) As the price of a good increases, demand increases.

B) As the price of a good decreases, demand decreases.

C) There is an inverse relationship between price and demand, ceteris paribus.

D) Demand is unaffected by changes in price.

Correct Answer: C

Explanation: The Law of Demand states that, ceteris paribus, there is an inverse relationship between the price of a good and the quantity demanded. This means that when the price rises, demand tends to fall, and vice versa. Option C accurately captures this principle. The other options misstate the law or suggest a direct relationship, which contradicts basic economic theory.

- Analyze the Question Carefully:** Read each question thoroughly, noting keywords like "ceteris paribus," "inverse relationship," or specific data points. These clues guide you toward the correct reasoning.
- Eliminate Implausible Options:** Use logical deduction to discard clearly incorrect choices, increasing your chances of selecting the correct answer.
- Refer to Theoretical Foundations:** When in doubt, recall relevant theories, models, or formulas. For instance, understanding the formula for price elasticity helps solve related questions efficiently.
- Practice Regularly with Solved MCQs:** Consistent practice consolidates knowledge, improves speed, and familiarizes you with question patterns.

Curated Examples of Solved MCQs in Economics

Below are several representative solved MCQs, each accompanied by detailed reasoning and insights.

Example 1: Demand and Elasticity

Question: If the price elasticity of demand for a good is 0.5, what will be the percentage change in quantity demanded if the price decreases by 10%?

A) 5% increase

B) 2% increase

C) 20% increase

D) 50% increase

Correct Answer: B

Solution and Explanation: Price elasticity of demand (PED) is calculated as:

$$PED = \frac{\% \text{ Change in Quantity Demanded}}{\% \text{ Change in Price}}$$

Given: $PED = 0.5$

$$0.5 = \frac{\% \text{ Change in Quantity Demanded}}{-10\%}$$

(decrease, hence negative)

Rearranging to find the percentage change in quantity demanded:

$$\% \text{ Change in Quantity Demanded} = PED \times \% \text{ Change in Price}$$

$$= 0.5 \times -10\% = -5\%$$

A 5% increase in quantity demanded.

$0.5 \times (-10) = -5\%$ \] Since demand increases when prices decrease, the magnitude is positive: Answer: 5% increase But note that the question asks for the percentage change in quantity demanded when price decreases by 10%. Because the demand is inelastic ($PED < 1$), the percentage change in demand is less than the percentage change in price. Correct choice: B) 2% increase is not correct; the actual calculation yields 5%. But since B says 2%, we need to re-express. Let's check options. Actually, the calculation shows 5%. Therefore, the correct answer should be A) 5% increase. Correction: The initial options had a mistake. The correct answer is: Answer: A) 5% increase Key insight: The importance of understanding the sign conventions and the actual calculation process.

Example 2: Market Equilibrium Question: In a perfectly competitive market, if demand increases while supply remains unchanged, what is likely to happen? A) Price falls, quantity decreases B) Price rises, quantity remains unchanged C) Price rises, quantity increases D) Price remains unchanged, quantity increases Correct Answer: C Explanation: An increase in demand shifts the demand curve outward/rightward. With supply unchanged, this leads to: Higher equilibrium price (due to increased competition among buyers) Higher equilibrium quantity (more goods are demanded at the new higher price) Thus, the market moves to a new equilibrium with both price and quantity higher. Answer: C) Price rises, quantity increases Educational takeaway: Recognizing demand-supply shifts helps anticipate outcomes in market equilibrium.

Example 3: Fiscal Policy Impact Question: An increase in government expenditure, assuming other factors constant, will most likely result in: A) Decreased aggregate demand B) Increased aggregate demand C) No change in aggregate demand D) Increased aggregate supply Correct Answer: B Explanation: An increase in government expenditure is a component of aggregate demand (AD). When government spending increases: Aggregate demand shifts rightward This tends to increase overall output and prices in the short run Therefore, the most probable outcome is an increase in aggregate demand. Answer: B) Increased aggregate demand Key learning point: Fiscal policy tools directly influence aggregate demand levels.

Sample Economics Solved Questions and Answers Question 1: Define the Law of Demand. Explain its exceptions. Answer: The Law of Demand states that, *ceteris paribus* (all other factors being constant), there is an inverse relationship between the price of a good and the quantity demanded. In simple terms, as the price of a good increases, demand decreases, and vice versa. Exceptions include: Giffen Goods: Inferior goods for which demand increases as the price rises, due to income effects. Veblen Goods: Luxury goods where higher prices increase desirability. Necessities: Goods with inelastic demand, where demand remains unaffected by price changes. Question 2: Explain the concept of Price Elasticity of Demand with its types. Answer: Price Elasticity of Demand measures how much the quantity demanded of a good responds to a change in its price. It is calculated as:
$$\text{Elasticity} = (\% \text{ Change in Quantity Demanded}) / (\% \text{ Change in Price})$$
 Types of Price Elasticity of Demand: Elastic Demand (Elasticity > 1): Quantity demanded changes proportionally more than the price. Inelastic Demand (Elasticity < 1): Quantity demanded changes less than the price change. Unitary Elasticity (Elasticity = 1): Quantity demanded changes proportionally with price. Perfectly Elastic Demand: Infinite responsiveness at a specific price. Perfectly Inelastic Demand: No change in demand regardless of price changes.
