Question 1: Multiple Choice Which of the following structures is responsible for controlling the movement of materials into and out of the cell?

- a) Nucleus
- b) Cell membrane
- c) Cytoplasm
- d) Ribosome

Answer: b) Cell membrane

Explanation: The cell membrane functions as a selective barrier, controlling the movement of substances into and out of the cell,

maintaining homeostasis. Question 2: Short Answer Describe the role of enzymes in biological reactions. Answer: Enzymes are proteins that act as biological catalysts, speeding up chemical reactions in cells by lowering the activation energy required. They are specific to particular substrates and are not consumed during the reaction, allowing them to be reused multiple times.

Question 3: Data Analysis The table below shows the effect of temperature on enzyme activity.

Temperature (°C)		Rate of Reaction (units/min)	
50	60	30	80
50	60	30	80

50 60 30 80 40 100
Analyze the data and explain at which temperature the enzyme functions most efficiently. Answer: The enzyme exhibits the highest activity at 40°C, with a reaction rate of 100 units/min. This indicates that enzyme activity increases with temperature up to an optimal point (40°C), beyond which activity declines, likely due to enzyme denaturation at higher temperatures.

Question 4: Diagram Labeling Label the parts of a plant cell shown in the diagram below. Answer: Students should identify parts such as the cell wall, chloroplasts, nucleus, vacuole, and cytoplasm, explaining their functions briefly.
