This engine configuration delivers a distinctive triple-cylinder sound and a linear power curve, characterized by smooth throttle response and ample mid-range torque. The engine's design emphasizes reliability and ease of maintenance, with features like a forged crankshaft, lightweight connecting rods, and a robust cylinder head.

Transmission and Gearbox

The manual transmission in the Triumph 955i is a six-speed unit, designed for precise shifting and durability.

Gear Ratios: Optimized for both street and sport riding

Clutch: Wet, multi-plate clutch operated hydraulically

Shift Mechanism: Conventional foot-operated lever, with positive engagement

The gearbox's design ensures smooth upshifts and downshifts, reinforcing the bike's sporty yet controllable character. The clutch's hydraulic operation offers lighter pull, improving rider comfort on longer journeys or aggressive riding.

Chassis and Suspension

Frame: Aluminum twin-spar (truss) frame, lightweight yet rigid

Front Suspension: Inverted telescopic forks with adjustable preload and rebound damping

Rear Suspension: Single shock absorber with preload, rebound, and compression damping adjustments

Wheelbase: Approximately 1,460mm (57.5 inches)

Tires: Typically 120/70 ZR17 front, 180/55 ZR17 rear

The chassis design complements the engine's power, ensuring stability and agility. The suspension setup balances comfort with sportiness, allowing precise handling at high speeds and on winding roads.

Performance and Riding Experience

Power Delivery and Handling

The Triumph 955i's engine provides a broad power band, making acceleration smooth yet exhilarating. The bike's weight distribution and chassis geometry contribute to nimble handling, especially appreciated in twisty mountain roads or urban environments.

Acceleration: From 0-60 mph in approximately 3.2 seconds

Top Speed: Around 165 mph (266 km/h), depending on modifications and conditions

Handling: Precise, with excellent feedback through the handlebars and footpegs

The six-speed manual gearbox allows the rider to exploit the engine's full potential, whether cruising on highways or pushing through corners.

Braking and Safety Features

The Daytona 955i was equipped with high-performance braking components:

Front Brakes: Dual 308mm disc with four-piston calipers

Rear Brake: Single disc with twin-piston caliper

These braking systems offer strong stopping power with good modulation, essential for high-speed riding. Some models feature ABS, which enhances safety without compromising rider control.
