Introduction to Thermodynamics in Class 11 Chemistry

Thermodynamics is a branch of physical science that deals with the study of energy transformations in chemical systems. It explains how and why energy is transferred during chemical reactions and physical changes. In class 11 chemistry, thermodynamics introduces students to key concepts such as system and surroundings, types of systems, the first law of thermodynamics, enthalpy, entropy, and free energy.

Why is Thermodynamics Important?

It helps in understanding the spontaneity of reactions. It explains energy changes during chemical processes. It is fundamental for fields like physical chemistry, chemical engineering, and biochemistry.

Key Concepts Covered in NCERT Solutions for Class 11 Chemistry Thermodynamics

System and Surroundings
System: The part of the universe under study.
Surroundings: Everything outside the system.
Types of Systems: Open System, Closed System, Isolated System.
Types of Processes: Isothermal, Adiabatic, Isobaric, Isochoric.

First Law of Thermodynamics

Energy conservation principle. Mathematical expression: $\Delta U = q + w$
 ΔU : Change in internal energy

Sample Problems and Solutions

Example 1: Understanding the First Law of Thermodynamics
Problem: A system absorbs 500 J of heat and does 200 J of work. What is the change in internal energy?
Solution: Using the first law: $\Delta U = q + w$
 Here, $q = +500$ J (absorbed), $w = -200$ J (done by the system)
 $\Delta U = 500$ J - 200 J = 300 J
Answer: The internal energy increases by 300 J.

Example 2: Calculating Enthalpy Change
Problem: Calculate the enthalpy change for the expansion of 1 mole of an ideal gas at constant temperature from 1 L to 10 L at 25°C.
Solution: Since the process is isothermal (constant temperature), ΔH for an ideal gas depends on ΔU and $P\Delta V$: $\Delta H = \Delta U + P\Delta V$
 For an ideal gas, $\Delta U = 0$ at constant temperature. $P = RT / V$
 Calculate P at initial and final states: At 1 L (0.001 m³): $P_1 =$

$(8.314 \text{ J/mol}\cdot\text{K} \times 298 \text{ K}) / 0.001 \text{ m}^3 = 2,477,772 \text{ Pa}$ At 10 L (0.01 m³): $P = (8.314 \times 298) / 0.01 = 247,777 \text{ Pa}$ Since the expansion occurs at constant temperature, the enthalpy change: $\Delta H = nRT \ln(V_2 / V_1) = 1 \text{ mol} \times 8.314 \times 298 \times \ln(10 / 1) = 1 \times 8.314 \times 298 \times 2.303 = 5690 \text{ J}$ Answer: The enthalpy change is approximately 5690 J.

Effective Utilization
Before Class: Review solutions to preview topics.
During Study: Use solutions to clarify doubts while solving textbook questions.
Post-Preparation: Revise difficult topics using solutions to reinforce learning.
Mock Tests: Simulate exam conditions using problems from solutions.
Sample Breakdown: Solving a Typical NCERT Question in Physical Chemistry
Question: Calculate the molar mass of a gas if its vapor pressure at 25°C is 200 mm Hg and the vapor pressure of pure water at the same temperature is 23.8 mm Hg. Assume the gas obeys Dalton's law of partial pressures.
Solution Approach:
Identify knowns: Vapor pressure of the gas, $P_{\text{gas}} = 200$ mm Hg
 Vapor pressure of water, $P_{\text{water}} = 23.8$ mm Hg
 Temperature, $T = 25^{\circ}\text{C} = 298$ K
Use Dalton's Law: Total pressure, $P_{\text{total}} = P_{\text{gas}} + P_{\text{water}}$
 Calculate the partial pressure of the gas: $P_{\text{gas}} = 200$ mm Hg
Apply ideal gas law: $PV = nRT$
 Molar mass $M = (\text{mass} / \text{moles})$
 Determine the number of moles (assuming 1 g sample):
 Use the relation: $P \times V = \frac{m}{M} \times R \times T$
 Rearranged to find M : $M = (\text{mass} \times R \times T) / (P \times V)$
 Plug in the values: $R = 0.0821$ L·atm/(mol·K)
 Convert pressure to atm: $200 \text{ mm Hg} = 200/760 \approx 0.263$ atm
 Assume $V = 1$ L for simplicity
 Calculate M : $M = (1 \text{ g} \times 0.0821 \times 298) / (0.263 \times 1) \approx 93$ g/mol
Final Answer: The molar mass of the gas is approximately 93 g/mol.
 This step-by-step approach exemplifies how NCERT solutions break down complex problems for clarity.
