2. Break Down the Problem Determine what data is provided Recognize what needs to be calculated or proven
3. Plan a Solution Strategy Choose appropriate methods (e.g., algebraic manipulation, graphing) Decide on the steps needed to reach the solution
4. Execute the Plan Perform calculations carefully Keep track of intermediate results Use correct notation and units
5. Verify the Solution Check calculations Ensure the answer makes sense in the context Cross-verify with alternative methods if possible
6. Write a Clear, Complete Answer Summarize findings succinctly Include all relevant steps and reasoning

Sample Investigation Problem and Solution To illustrate the process, here's an example of a typical Saxon Math 8/7 investigation question, followed by a detailed solution.

Problem: A rectangular garden has a length that is 3 meters longer than its width. The area of the garden is 54 square meters. Find the dimensions of the garden.

Solution Steps: Define variables: Let w = width of the garden (meters). Then, length $l = w + 3$. Write the area equation: $\text{Area} = l \times w$. So, $(w + 3) \times w = 54$. Set up the quadratic equation: $w^2 + 3w = 54$. Rewrite as $w^2 + 3w - 54 = 0$. Factor or use quadratic formula: The quadratic factors as: $w^2 + 3w - 54 = (w + 9)(w - 6) = 0$. So, $w = -9$ or $w = 6$. Since width cannot be negative, $w = 6$. Find length: $l = w + 3 = 6 + 3 = 9$.

Answer: The dimensions are 6 meters (width) and 9 meters (length).
